

SMART PPE™ POWERED BY SCANNABLE®

The mark of **Smart PPE™**

The Scannable hangtag ships with every Smart PPE™ item, and shows the market your product has a new standard of intelligence built in.

Scannable Smart PPE™.

A global marker of quality.✓

- ✓ It showcases that your product is more than just a piece of equipment, it's a smart product with a new standard of safety and intelligence built in.
- ✓ It's a recognisable marker of quality that differentiates your product to consumers 'on the shelf'
- ✓ It's gives consumers a reason to buy your product, and educates them in a few easy steps how to use it, and why they should buy it – Smart PPE™ is the future, don't get left behind.

Hangtags are premium 350 gsm coated card die-cut, available in different sizes and languages on request – provided free of charge.

Three formats that work across different products.

Make your product stand out, regardless of product category.

4mm Ø Hole

Our standard hang tag to attach to Smart PPE items. Single 4 mm Ø punched hole, threadable with provided recycled plastic kimble.

50 × 50 MM

Ø 4 MM Ø HOLE

350 GSM

EU Slot

For threading sling through EU slot.

50 × 55 MM

32 × 6 MM SLOT

350 GSM

23mm Ø Hole

For (wire) strops, webbing, lanyards and rope — anything threaded through the punched slot.

50 × 70 MM

23 MM Ø SLOT

350 GSM

Brand front. Instructions back.

FRONT · BRAND

BACK · INSTRUCTIONS

- 1 Front carries the Scannable brand**
Identical across every Smart PPE™ product, so end users learn one mark for the whole range.
- 2 Back carries the call to action**
One simple action: *“Tap phone to NFC Tag to change your equipment’s life.”*
Different variants exists depending on what Scannable technology is used (NFC, QR Codes or Data Matrix).
- 3 NFC, or 2D codes on the product**
The NFC tag or 2D code itself is embedded in the product — the hangtag is the wayfinder. Tap or scan opens the item on mobile and the equipment owner can add to inventory.

The hangtag is a single-use intro at the point of product interaction to encourage inventory management with Scannable. No NFC technology sits in the hangtag.

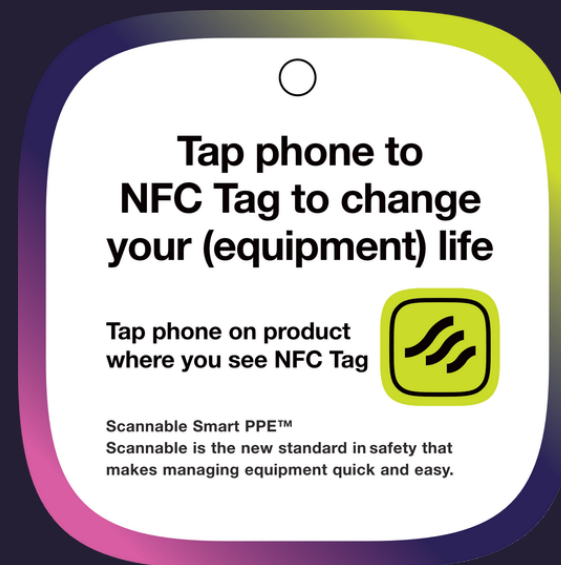

NFC vs 2D codes. Different tech, same outcome.

Smart PPE™ works in different ways – it can be produced with embedded NFC tags in the items.

Or it can be made with 2D code enabled technology, such as a QR code or a data matrix.

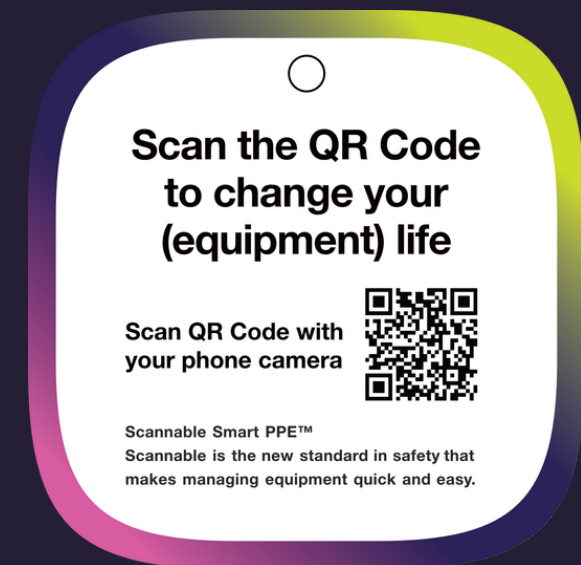

We offer our hangtags in two variants to support the different technologies.

One for NFC enabled items, one for 2D code enabled items.

For NFC enabled items

Instructions guide equipment owner to tap the NFC tag embedded in the Smart PPE™ item. Tapping the NFC tag will open the item in the Scannable app, or in the browser if the app isn't installed.

For 2D code enabled items

Equipment owners can't use their native camera app to scan a data matrix today. To solve for this, the QR code on the hangtags opens up a page that enables them to read a data matrix through their phone camera. This works regardless of if the person is using the Scannable app.

How to **order** hangtags.

Hangtags are provided free of charge.

To order your hang tags, email orders@scannable.io with the SKU number, desired quantity and delivery address.

We supply hangtags in boxes of 1000 pieces each.
